rise of China and the American pivot, to the shifting calculations of many other actors. Strategic culture sometimes challenges and always enriches prevailing neo-realist presumptions about the region. It provides a bridge between material and ideational explanations of state behavior and helps capture the tension between neoclassical realist and constructivist approaches. The case studies in this book survey the role of strategic culture in the behaviors of Australia, China, Japan, the Philippines, South Korea and the United States. They show

1887 the contrast between structural expectations and cultural predispositions, as realist geopolitical security threats and opportunities interact with domestic elite and popular interpretation of historical narratives and distinctive political-military cultures to influence security policies. The concluding chapter devotes special attention to methodological issues at the heart of strategic cultural studies, as well as how culture may impact the potential for future conflict or cooperation in the region. The result is a body of work that helps deepen our

1887 the more direct debates on peace and conflict studies. It explores themes relating to culture, development, agency and structure, not just in terms of representations of international relations, and of peace, but in terms of the discipline of IR itself. The work also specifically explores the recent mantras associated with liberal and neoliberal versions of peace, which appear to have become foundational for much of the mainstream literature in IR and for doctrines for peace and development in the policy world. Analysing war has often led to the dominance - and mitigation -

This study aims to redress this negative balance by arguing that IR offers a rich basis for the study of peace, which has advanced significantly over the last century or so. It also proposes innovative theoretical dimensions of the study of peace in IR, with new chapters discussing post-colonial and digital developments in the discipline. This book will be of great interest to students of peace and conflict studies, politics and International Relations.

The aviation community, in which the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the Civil Air Navigation Services Organization (CANSO) play leading roles, is hard at work in bringing aviation into the 21st Century. In doing so, the United States and Europe have taken proactive steps forward in introducing modernization, particularly in moving towards more efficient air traffic management systems within NextGen and SESAR. Elsewhere, in the fields of personnel licensing, rules

of the air, accident investigation and aeronautical charts and information, significant strides are being made in moving from mere regulation to implementation and assistance calculated to make all ICAO member States self sufficient in international civil aviation. However, these objectives can be achieved only if the aviation industry has a sustained understanding of the legal and regulatory principles applying to the various areas of air navigation. This book provides that discussion. Some of the subjects discussed in this

Soldier, pilot, wireless pioneer, squadron commander, spiritualist, champion skier, 'Stuffy' Dowding is perhaps best known as the creator of the first radar-based air defense system and his no less remarkable management of such throughout the Battle of Britain. Dowding served in 'delightful and dangerous Iraq', helped to pacify unrest in the Holy Land, was involved in the R.101 airship disaster and oversaw the creation of Britain's first eight-gun monoplane, the Hurricane and Spitfire. Controversially dismissed from Fighter Command and refused the R.A.F.'s highest

1887, he nevertheless became the first airman elevated to the peerage since Trenchard. Westminster Abbey was packed for his memorial service in March 1970 with more than 46 air marshals in attendance; and in 1988 H.M. the Queen Mother unveiled a statue in his honor. With his expert eye, respected historian Orange has analyzed and evaluated every episode of Dowding's exceptional career to produce what will be seen as the definitive biography.

Second, it looks at the many interesting and difficult choices ahead that the airline industry in general and the international aviation industry in particular face. These choices include many dichotomies: pulling back from the trend toward liberalization or embracing the liberalization trend, merging in search of profitability or fragmenting the industry in search of economies. These possible futures are explored including the pros and cons of each future from a

national, consumer, employer, and employee perspective. As with the previous two editions, Evolution of International Aviation reviews the historical development of the international aviation system. From this foundation it then provides an updated and expanded account of the current state of the aviation and aerospace industry including profitability, consolidation, and merger activity. New to this edition, the book broadens the coverage of the industry segments - airlines, air cargo, and manufacturing - to include the emerging

It also emphasizes the relationship between aviation and the political process, exploring the sustainability of this mode of transportation in a world of climate change, high oil prices, and political instability. Because this book is intended for both the interested amateur and the more serious student, references are provided in the text and at the end of each chapter to allow for further in-depth study. The third edition also adds to each chapter a set of learning objectives and a concluding series of questions for discussion.

This book presents a thorough analysis of the EU provisions and legal framework of passenger rights in the civil aviation field. It provides both a theoretical and practical view of the initiatives that have been taken in this field. This includes initiatives taken by the European Commission (EC) with the aim to improve the protection of passengers and by the European Court of Justice (ECJ) with regard to jurisprudence. The book points out the goals that have been obtained so far, as well as the goals that still need to be pursued.

Particular attention is paid to EU institutions that have been created ad hoc to supervise aviation safety and harmonize the various safety procedures of the EU Member States. Recent and upcoming packages of important safety and security measures are examined in detail. The book gives examples of current applications of legislative instruments and presents readers with the tools to gain a deeper understanding of the legal, practical and theoretical aspects of this important topic in aviation.
