concepts you need to succeed in an introductory biology course. From identifying the structures and functions of plants and animals to grasping the crucial discoveries in evolutionary, reproductive, and ecological biology, this easy-to-follow guide lets you skip the suffering and score high at exam time. Get down to basics – master the fundamentals, from understanding what biologists study to how living things are classified The chemistry of life – find out what you need to know about atoms, elements, molecules, compounds, acids, bases, and more Conquer and divide – discover the ins and outs of asexual and sexual reproduction, including cell division and DNA replication Jump into the gene pool – grasp how proteins make traits happen, and easily understand DNA transcription, RNA processing, translation, and gene regulation.

The major subdisciplines of ecology--population ecology, community ecology, ecosystem ecology, and evolutionary ecology--have diverged increasingly in recent decades. What is critically needed today is an integrated, real-world approach to ecology that reflects the interdependency of biodiversity and ecosystem functioning. From Populations to Ecosystems proposes an innovative theoretical synthesis that will enable us to advance our fundamental understanding of ecological systems and help us to respond to today's emerging global ecological crisis. Michel Loreau begins by explaining how the principles of population dynamics and ecosystem functioning can be merged. He then addresses key issues in the study of biodiversity and ecosystems, such as functional complementarity, food webs, stability and complexity, material cycling, and metacommunities. Loreau describes the most recent theoretical advances that link the properties of individual populations to the aggregate properties of communities, and the properties of functional groups or trophic levels to the functioning of whole ecosystems, placing special emphasis on the relationship between biodiversity and ecosystem functioning. Finally, he turns his attention to the controversial issue of the evolution of entire ecosystems and their properties, laying the theoretical foundations for a genuine evolutionary ecosystem ecology. From Populations to Ecosystems points the way to a much-needed synthesis in ecology, one that offers a fuller understanding of ecosystem processes in the natural world.

Peterson's Graduate Programs in Computational, Systems, & Translational Biology; Ecology, Environmental Biology, & Evolutionary Biology; and Entomology contains a wealth of information on universities that offer graduate/professional degrees in these fields. Originally published in 1985. China is currently making a massive effort to educate its workforce in a formal and structured system. A good deal has been written about China's attempts, since 1949, to eradicate illiteracy and to universalise primary and secondary school education but the subject of this book is an educational system established to meet the needs of those already employed whether in government, industry or agriculture. Two study teams, sponsored by the International Council for Adult Education, visited China in 1981 to explore this educational phenomenon. Their findings, updated by subsequent ICAE visits and enriched by further reading, form the basis of this book. This is the story of the Chinese experience of developing adult education. It will be valuable to those involved in extending education in the industrialised world who are pursuing modernisation goals for people long

excluded from the formal education system.

Even though contemporary biology and mathematics are inextricably linked, high school biology and mathematics courses have traditionally been taught in isolation. But this is beginning to change. This volume presents papers related to the integration of biology and mathematics in high school classes. The first part of the book provides the rationale for integrating mathematics and biology in high school courses as well as opportunities for doing so. The second part explores the development and integration of curricular materials and includes responses from teachers. Papers in the third part of the book explore the interconnections between biology and mathematics in light of new technologies in biology. The last paper in the book discusses what works and what doesn't and presents positive responses from students to the integration of mathematics and biology in their classes.

Peterson's Private Secondary Schools is everything parents need to find the right private secondary school for their child. This valuable resource allows students and parents to compare and select from more than 1,500 schools in the U.S. and Canada, and around the world. Schools featured include independent day schools, special needs schools, and boarding schools (including junior boarding schools for middle-school students). Helpful information listed for each of these schools include: school's area of specialization, setting, affiliation, accreditation, tuition, financial aid, student body, faculty, academic programs, social life, admission information, contacts, and more. Also includes helpful articles on the merits of private education, planning a successful school search, searching for private schools online, finding the perfect match, paying for a private education, tips for taking the necessary standardized tests, semester programs and understanding the private schools' admission application form and process.
