Imidacloprid Human Health and Ecological Risk Assessment ...

imidacloprid formulation. Dose Estimate:
?5240 mg or 76 mg/kg bw assuming 70 kg.
Elevated temperature (100.4 °F), rapid
heartbeat. Normal blood profile except for
low potassium (2.9 mEq/L). Recovery and
discharge after 5 days in hospital. No
aggressive supportive care reported. David et
al. 2004 Male, in 70s, 56 kg Japan

Imidacloprid: Human Health and Ecological Risk Assessment ...

Exposure: Effects of imidacloprid on human
health and the environment depend on how much
imidacloprid is present and the length and
frequency of exposure. Effects also depend on
the health of a person and/or certain
environmental factors.

Imidacloprid is an insecticide approved for use in the EU with certain restrictions for flowering crops. It is highly soluble, non-volatile and persistent in soil. It is moderately mobile. It has a low risk of bioaccumulating. It is highly toxic to birds and honeybees. Moderately toxic to mammals and earthworms. It is non-toxic to fish.

Imidacloprid (Ref: BAY NTN 33893)

Four studies identified in this review reported an association between chronic environmental exposure to IMI, THX, or N-desmethyl-acetamiprid (DMAP), a metabolite of ACE, and an adverse human health effect (Carmichael et al. 2014; Keil et al. 2014; Marfo et al. 2015; Yang et al. 2014).

Effects of Neonicotinoid Pesticide Exposure on Human ...

showed that imidacloprid is an agonist to the acetylcholine receptors that regulates the endocrine system in the brain (Reference 1). Mutagenicity studies showed that imidacloprid is not mutagenic or genotoxic, but may make an organism more susceptible to DNA damage (Reference 3).

registration review documents, opened on December 21, 2017 for an initial 60-day public comment period. 1

Imidacloprid Proposed Interim Registration Review Decision ...

Imidacloprid is a systemic insecticide that acts as an insect neurotoxin and belongs to a class of chemicals called the neonicotinoids which act on the central nervous system of insects. The chemical works by interfering with the transmission of stimuli in the insect nervous system. Specifically, it causes a blockage of the nicotinic neuronal pathway. By blocking nicotinic acetylcholine receptors, imidacloprid prevents acetylcholine from transmitting impulses between nerves, resulting in the
