Landscape Architecture BSc This course aims to educate landscape architects who have a more in-depth understanding of ecology and habitat creation. If you enjoy subjects related to biology or environmental sciences, or have a keen interest in the natural world, this course will equip you to combine a more detailed appreciation of ecological processes and how they work within the designed landscape.

Architecture and Landscape BA Gain two professional qualifications, in architecture and landscape architecture, with this unique three year honours degree. The dual degree course is an exciting and challenging programme which explores the integrated design of buildings and the wider landscape environment. Start: September 2021

Undergraduate (RIBA Part 1) courses - University of Sheffield

It is this combination of a rigorous academic base and accretive professional direction that exemplifies architecture at Sheffield. The dual degrees in Architecture and Landscape Architecture and Structural Engineering and Architecture enable students to integrate their architectural design work with an additional discipline, ultimately achieving dual professional qualifications.

Postgraduate Diploma in Landscape Architecture is accredited by the Landscape Institute and the International Federation of Landscape Architects. This is a two-year conversion course for graduates who want to qualify and work as professional landscape architects.

Form and Fabric in Landscape Architecture provides an original, visual approach to the study of landscape architecture by creating a spatial morphology based on use and experience of landscapes. It explores aesthetic, spatial and experiential concepts by providing a structure through which landscapes can be understood and conceived in design. 'Fabric' is the integrated structure of whole landscapes, while 'form' refers to the components that make up this fabric. Together form and fabric create a morphology of landscape useful for the development of visual-spatial design thinking and awareness. This book is intended as both an introduction to the discipline for students of landscape architecture, architecture and planning, and a source of continuing interest for more experienced environmental designers.

Place-Keeping presents the latest research and practice on place-keeping - that is, the long-term management of public and private open spaces - from around Europe and the rest of the world. There has long been a focus in urban landscape planning and urban design on the creation of high-quality public spaces, or place-making. This is supported by a growing body of research which shows how high-quality public spaces are economically and socially beneficial for local communities and contribute positively to residents' quality of life and wellbeing. However, while large amounts of capital are spent on the creation of open spaces, little thought is given to, and insufficient resources made available for, the long-term maintenance and management of public spaces, or place-keeping. Without place-keeping, public spaces can fall into a downward spiral of disrepair where anti-social behaviour can emerge and residents may feel unsafe and choose to use other spaces. The economic and social costs of restoring such spaces can therefore be considerable where place-keeping does not occur. Place-Keeping also provides an accessible presentation of the outputs of a major European Union-funded project MP4: Making Places Profitable, Public and Private Open Spaces which further extends the knowledge and debate on long-term management of public and private spaces. It will be an invaluable resource for students, academics and practitioners seeking critical but practical guidance on the long-term management of public and private spaces in a range of contexts.

Form and Fabric in Landscape Architecture provides an original, visual approach to the study of landscape architecture by creating a spatial morphology based on use and experience of landscapes. It

explores aesthetic, spatial and experiential concepts by providing a structure through which landscapes can be understood and conceived in design. 'Fabric' is the integrated structure of whole landscapes, while 'form' refers to the components that make up this fabric. Together form and fabric create a morphology of landscape useful for the development of visual-spatial design thinking and awareness. This book is intended as both an introduction to the discipline for students of landscape architecture, architecture and planning, and a source of continuing interest for more experienced environmental designers.

What can architects, landscape architects and urban designers do to make urban open spaces, streets and squares, more responsive, lively and safe? Urban Sustainability through Environmental Design answers this question by providing the analytical tools and practical methodologies that can be employed for sustainable solutions to the design and management of urban environments. The book calls into question the capability of 'quick-fix' development solutions to provide the establishment of fixed communities and suggests a more time-conscious and evolutionary approach. This is the first significant book to draw together a pan-European view on sustainable urban design with a specific focus on social sustainability. It presents an innovative approach that focuses on the tools of urban analysis rather than the interventions themselves. With its practical approach and wide-ranging discussion, this book will appeal to all those involved in producing communities and spaces for sustainable living, from students to academics through to decision makers and professional leaders.

Drawing conceptually and directly on music notation, this book investigates landscape architecture's inherent temporality. It argues that the rich history of notating time in music provides a critical model for this under-researched and under-theorised aspect of landscape architecture, while also ennobling sound in the sensory appreciation of landscape. A Musicology for Landscape makes available to a wider landscape architecture and urban design audience the works of three influential composers - Morton Feldman, György Ligeti and Michael Finnissy - presenting a critical evaluation of their work within music, as well as a means in which it might be used in design research. Each of the musical scores is juxtaposed with design representations by Kevin Appleyard, Bernard Tschumi and William Kent, before the author examines four landscape spaces through the development of new landscape architectural notations. In doing so, this work offers valuable insights into the methods used by landscape architects for the benefit of musicians, and by bringing together musical composition and landscape architecture through notation, it affords a focused and sensitive exploration of temporality and sound in both fields.

Urban Wildscapes is one of the first edited collections of writings about urban 'wilderness' landscapes. Evolved, rather than designed or planned, these derelict, abandoned and marginal spaces are frequently overgrown with vegetation and host to a wide range of human activities. They include former industrial sites, landfill, allotments, cemeteries, woods, infrastructural corridors, vacant lots and a whole array of urban wastelands at a variety of different scales. Frequently maligned in the media, these landscapes have recently been re-evaluated and this collection assembles these fresh perspectives in one volume. Combining theory with illustrated examples and case studies, the book demonstrates that urban wildscapes have far greater significance, meaning and utility than is commonly thought, and that an appreciation of their particular qualities can inform a far more sustainable approach to the planning, design and management of the wider urban landscape. The wildscapes under investigation in this book are found in diverse locations throughout the UK, Europe, China and the US. They vary in scale from small sites to entire cities or regions, and from discrete locations to the imaginary wildscapes of children's literature. Many different themes are addressed including the natural history of wildscapes, their significance as a location for all kinds of playful activity, the wildscape as 'commons' and the implications for landscape architectural practice, ranging from planting interventions in wildscapes to the design of the urban public realm on wildscape principles.

The experience of movement, of moving through buildings, cities, landscapes and in everyday life, is the only involvement most individuals have with the built environment on a daily basis. User experience is so often neglected in architectural study and practice. Architecture and Movement tackles this complex subject for the first time, providing the wide range of perspectives needed to tackle this multi-disciplinary topic. Organised in four parts it: documents the architect's, planner's, or designer's approach, looking at how they have sought to deploy buildings as a promenade and how they have thought or written about it. concentrates on the individual's experience, and particularly on the primacy of walking, which engages other senses besides the visual. engages with society and social rituals, and how mutually we define the spaces through which we move, both by laying out routes and boundaries and by celebrating thresholds. analyses how we deal with promenades which are not experienced directly but via other mediums such as computer models, drawings, film and television. The wide selection of contributors include academics and practitioners and discuss cases from across the US, UK, Europe and Asia. By mingling such disparate voices in a carefully curated selection of chapters, the book enlarges the

understanding of architects, architectural students, designers and planners, alerting them to the many and complex issues involved in the experience of movement.

Defining a research question, describing why it needs to be answered and explaining how methods are selected and applied are challenging tasks for anyone embarking on academic research within the field of landscape architecture. Whether you are an early career researcher or a senior academic, it is essential to draw meaningful conclusions and robust answers to research questions. Research in Landscape Architecture provides guidance on the rationales needed for selecting methods and offers direction to help to frame and design academic research within the discipline. Over the last couple of decades the traditional orientation in landscape architecture as a field of professional practice has gradually been complemented by a growing focus on research. This book will help you to develop the connections between research, teaching and practice, to help you to build a common framework of theory and research methods. Bringing together contributions from landscape architects across the world, this book covers a broad range of research methodologies and examples to help you conduct research successfully. Also included is a study in which the editors discuss the most important priorities for the research within the discipline over the coming years. This book will provide a definitive path to developing research within landscape architecture.
